

Nodus Chain Whitepaper (V1.0)

1. Executive Summary

Nodus Chain is a next-generation, high-performance, and fully EVM-compatible blockchain network designed to redefine accessibility in Decentralized Finance (DeFi). Powered by its native cryptocurrency, **NDS**, the Nodus ecosystem provides a seamless, secure, and ultra-low-cost environment for developers and everyday users alike.

Going beyond a traditional Layer-1 network, Nodus Chain comes out of the box with a comprehensive suite of native dApps: **NodusSwap (DEX)**, **Token Factory**, and **Nodus Launchpad**. This integrated approach eliminates the fragmentation typically found in Web3, providing an all-in-one hub where users can mint, launch, and trade digital assets instantly.

2. Vision and Mission

- **Mission:** To dismantle the technical barriers of Web3 by providing a unified ecosystem where anyone—regardless of coding experience—can create tokens, raise funds, and trade securely within minutes.
- **Vision:** To become the definitive, community-driven financial infrastructure of the future, enabling frictionless digital economies through a secure, fast, and scalable blockchain ecosystem.

3. Network Architecture and Technology

Nodus Chain is built upon Ethereum's battle-tested infrastructure, utilizing the Go-Ethereum (Geth) client but optimized for significantly higher throughput and near-zero transaction costs.

- **Consensus Mechanism: Proof of Authority (PoA) - Clique.** Nodus Chain utilizes a PoA consensus algorithm. Unlike energy-intensive Proof of Work (PoW), PoA relies on a set of trusted, pre-approved validator nodes to create blocks. This ensures enterprise-grade security, instant transaction finality, and extreme energy efficiency.
- **EVM Compatibility:** 100% compatible with Ethereum Virtual Machine. It natively supports Metamask, TrustWallet, and hundreds of mobile wallets via WalletConnect V2. Developers can deploy existing Solidity smart contracts effortlessly.

4. Ecosystem Core Components

4.1. NodusSwap (Decentralized Exchange)

The liquidity engine of the network. NodusSwap is an Automated Market Maker (AMM) protocol allowing users to swap any NDS-20 tokens trustlessly. Users who provide liquidity to the pools earn a 0.3% fee on trades, incentivizing a deep and liquid market.

4.2. Token Factory (No-Code Minting)

A revolutionary interface that allows anyone to deploy custom NDS-20 tokens in seconds. The Factory supports advanced tokenomics configurations out-of-the-box, including mintable, burnable, and tax-on-transfer (deflationary) token mechanics, requiring absolutely no programming knowledge.

4.3. Nodus Launchpad

A secure and decentralized Initial Coin Offering (ICO) platform. Project creators can seamlessly conduct presales, set soft/hard caps, and automatically lock liquidity upon presale completion, guaranteeing investor protection and building trust in new projects.

5. Tokenomics (NDS)

The NDS coin is the lifeblood of the Nodus ecosystem. It is required to pay for all network transaction fees (Gas) and platform service fees.

- **Token Name:** Nodus Coin
- **Symbol:** NDS
- **Decimals:** 18
- **Maximum Supply:** 103,000,000 NDS

5.1. Token Distribution

The distribution of the 103 Million NDS supply is strategically designed to ensure long-term sustainability, liquidity, and continuous development of the ecosystem:

Allocation	Amount (NDS)	Percentage	Vesting & Lock Schedule
Developer Ecosystem	51,000,000	~49.5%	Locked for 4 Years. Dedicated to future network upgrades, grants, and infrastructure scaling.

Allocation	Amount (NDS)	Percentage	Vesting & Lock Schedule
Presale / ICO	25,000,000	~24.3%	Allocated for initial investors and community bootstrapping.
Team & Founders	10,000,000	~9.7%	1 Year Cliff (Fully Locked). After 1 year, unlocked linearly at 10% per month to align long-term incentives.
Marketing & Partnerships	10,000,000	~9.7%	Used for global campaigns, CEX listings, and strategic partnerships.
NodusSwap Liquidity	7,000,000	~6.8%	Locked in the native DEX to guarantee immediate and deep market liquidity at launch.

6. Roadmap

- **Phase 1 (Completed):** Genesis block generation, PoA Mainnet launch, deployment of NodusSwap and Token Factory.
- **Phase 2 (Completed):** Implementation of WalletConnect V2, mobile wallet optimizations, and Nodus Launchpad integration.
- **Phase 3 (Upcoming):** Aggressive marketing expansion, application for CoinMarketCap & CoinGecko listings, and cross-chain bridge integrations (ERC20 & BEP20 bridges).
- **Phase 4 (Future):** Launch of Nodus DAO for decentralized governance, enabling the community to vote on network upgrades and treasury allocations.
